Dear Dr. Nicolas Lecomte:

Please consider our revised manuscript ‘TIM: Tree Imaging Machine for high resolution rapid digital images of tree cores and cookies’ as an Applications and Practical Tools article for *Methods in Ecology and Evolution*.

---

Comments from reviewers have greatly improved this manuscript and led us to enhance the clarity of our tool, revise our figures and refine the language throughout the text. Both reviewers suggested that we include representative full-resolution images and include more information about our usage of the tool. We have added multiple scans of cores and cookies from different species in the supplementary material.

We have attempted to address the reviewer concerns and detail our changes in our point-by-point response (note that reviewer comments are in *italics*, while our responses are in regular text). The manuscript is words with word summary, and figures. We feel the new submission is much improved. This Practical Tools article is not under examination for publication elsewhere. We hope that you will find it suitable for *Methods in Ecology and Evolution*, and look forward to hearing from you.

Sincerely,

Catherine J Chamberlain
